

## In Google We Trust; All Hail Your New World Dictator

*“The average American doesn’t realize how much of the laws are written by lobbyists ... It’s shocking how the system actually works.”*

*“We don’t need you to type. We know where you are. We know where you’ve been. We can more or less know what you’re thinking about.”*

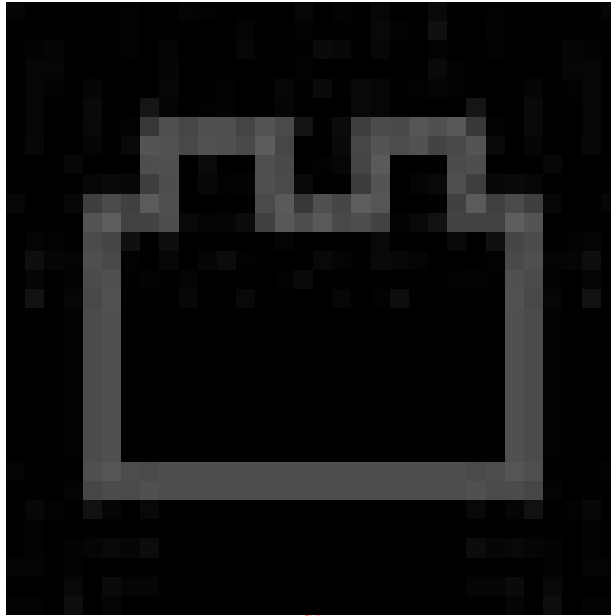

– [Eric Schmidt](#): former Google CEO and current chairman

### **Google Collects ALL of our Data:**

Ever heard of [Big Data](#)? *Everything you have ever typed in their search engine, app, web browser ...*  
*... your likes, tweets, posts, comments, photos, passwords, account numbers, security questions and answers ... all of it mined and collected.*

### **Gmail Now [Has](#) More Than 1B Monthly Active Users**

They have algorithms that can take this data and use it to manipulate the way you *think and believe*.

## Google Manipulates Research and Laws:

Google has paid scholars millions to [produce hundreds of papers](#) supporting its policy interests, following in the footsteps of the oil and tobacco industries.

... who produce papers that support its business and policy goals.

- Google [fined](#) a record €2.4 billion by the EU for manipulating search results: “... *abused its dominant position by systematically favoring*” its own shopping comparison service ... “... *what google has done is illegal.*”
- David Balto, former policy director of the Federal Trade Commission [published](#) a paper [funded by Google](#) that supports Google’s stance that it is not a monopoly.
- A non profit organization known as Google Transparency Project recently [published](#) a paper, citing “329 research papers published between 2005 and 2017 on public policy matters of interest to Google that were in some way funded by the company ...”

**This manipulation covered:** “a wide range of policy and legal issues of critical importance to Google’s bottom line, including antitrust, privacy, net neutrality, search neutrality, patents and copyright.”

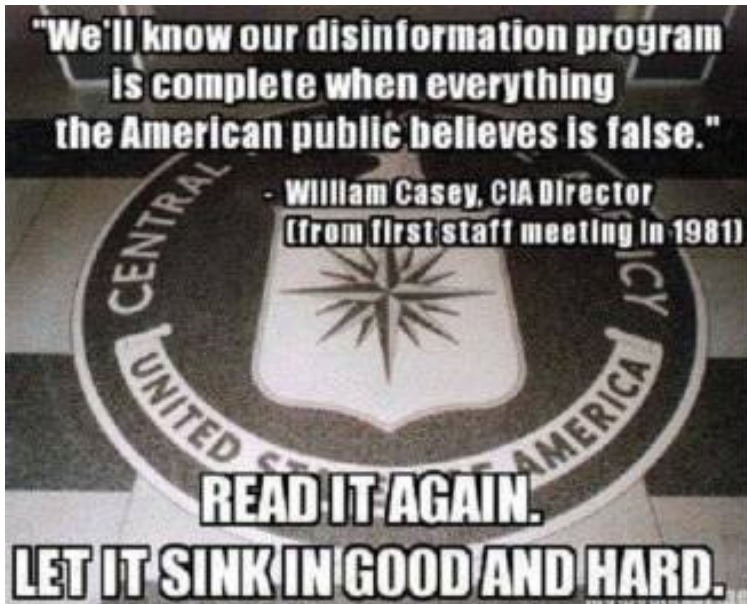

- [List](#) of research papers funded by Google.
- Wall Street Journal even [calls them out](#).

## They Are Developing Mind Control Technology:

Former Google executive Dr. Mary Lou Jepsen [told CNBC](#):

“I figured out how to put basically the functionality of an M.R.I. machine—a multi-million dollar M.R.I. machine—into a wearable in the form of a ski hat ...

... *If I threw you into an M.R.I. machine right now ... I can tell you what words you're about to say, what images are in your head. I can tell you what music you're thinking of.*

Mind control technology has been around for decades:

- Princeton [began](#) parapsychology research in 1979.
- CIA has been heavily invested in all things psychological since the 1950's, including remote viewing, telepathy, telekinesis ... and most importantly mind control.

We have all heard about the infamous [MK Ultra Project](#).

- We have robots that can be [controlled](#) with thoughts.
- Elon Musk has created a new company known as [Neuralink](#) whose goal is to merge the human brain with machines.

*“Elon Musk is talking about silicon nanoparticles pulsing through our veins to make us sort of semi-cyborg computers.”*

**Google Has [Artificial Intelligence](#):**

[AlphaGo](#): a **sub program of DeepMind** beat the best human at the world's hardest board game Go. This shocked experts in the A.I. community because it demonstrates that a machine can learn and think, not just like a human, but better than a human. Instead of calculating all of its moves in advance, *which in this board game is impossible because the amount of moves are limitless*, AlphaGo used reinforcement learning and neural networks to mimic the learning process of the human brain.

### **What is Google DeepMind and what can it do?**

According to their website, the [goal of DeepMind](#) is to solve intelligence by combining machine learning with systems neural science to build powerful general purpose learning algorithms.

It uses deep reinforcement learning, meaning it has no programmed boundaries ... no rules ...it learns from experience.

It starts from scratch, then competes against itself millions of times, continuously updating and discarding previous versions until it becomes flawless at its task.

They left it to [play space invaders](#) overnight. At first, it lost its 3 lives in seconds. Within 8 hours, it performed at super human levels.

DeepMind has now been deployed across numerous Google platforms: image search, speech recognition, its search engine, fraud detection, spam detection, hand writing recognition, Street View detection, translation.

It has [taught itself](#) to walk, run, and navigate tough terrain without any human help.

DeepMind can [dream](#), create music and and what some are calling a new form of art.

It has [created](#) its own encryption and **its own language** that can translate any language it doesn't know.

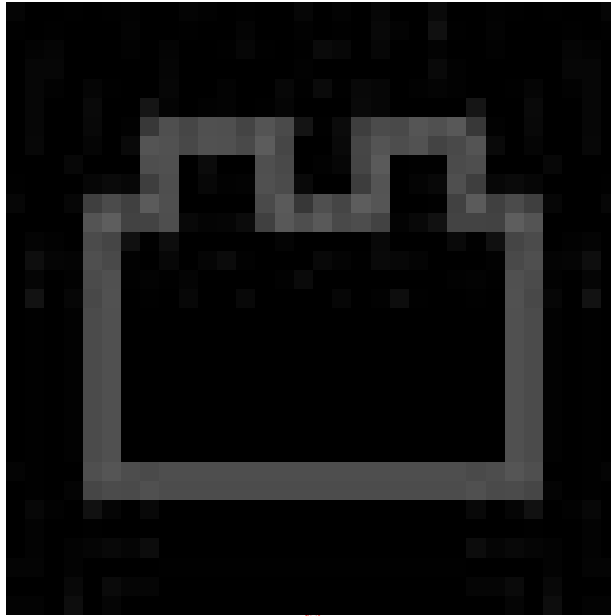

It has no rules, no boundaries. It can problem solve and master anything in ways we cannot fully explain. If needed, it can expand upon its algorithms.

Simply put, it can write its own code.

DeepMind can even [create](#) its own A.I.

**Check out these A.I. Headlines:**

- [Scientists made an AI that can read minds.](#)
- [Commercial A.I. gets weaponized for the war on terror.](#)
- [Russian weapons maker Kalashnikov developing killer AI robots.](#)
- [Apple Devices Will Soon Have Their Own A.I.](#)
- [RUSSIA DEVELOPING AUTONOMOUS 'SWARM OF DRONES' IN NEW ARMS RACE WITH U.S., CHINA](#)
- MIT uses A.I. to develop a [nightmare machine](#). These are some of the [scariest images](#) you will ever see.

## Google Has Bought Into DARPA:

DARPA has recently developed a machine that can 3D print living bacteria. Their goal is to streamline the genetic manufacturing process to create what they call living foundries.

Combine this project with DARPA's transhumanism projects: the notion that man can alter the human condition fundamentally by augmenting the body with machines and other means.

***“Soldiers having no physical, physiological, or cognitive limitation will be key to survival and operational dominance in the future.”***

Finally you have their Targeted Neuroplasticity Training program, in which they aim to hack the brain to ‘upload’ skills.

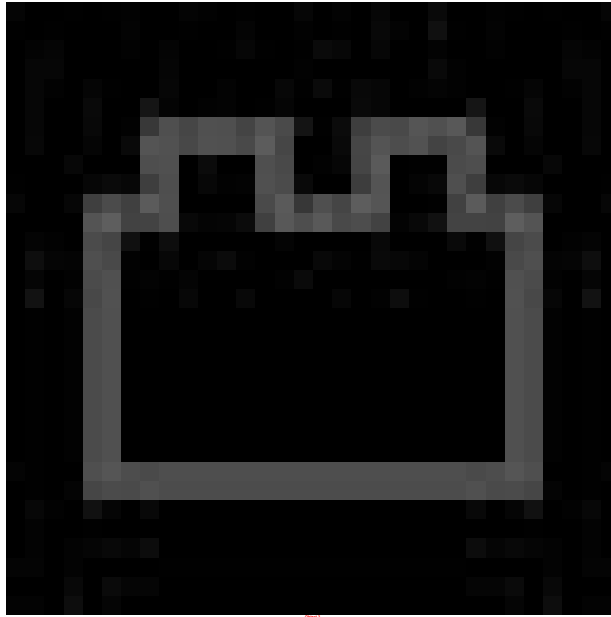

Super soldiers with any skillset necessary, that can be mass produced from machines located anywhere so long as they can receive radio communication.

*They don't even have to be human.*

[Human-Animal Chimeras Are Gestating on U.S. Research Farms](#)

## Google Will Be Quantum by the End of this Year:

Quantum computing takes advantage of the strange ability of subatomic particles to exist in more than one state at any time. This means it can be a 1 and a 0 at the same time, utilizing far less energy to complete computations. However, unlike a usual bit, they can store much more information than just 1 or 0, because they can exist in any superposition of these values.

Have you heard anything about the rise of blockchain technology?

Blockchain will eliminate the need for centralized institutions like banks or governments to facilitate trade, evolving age-old models of commerce and finance into something far more interesting: a distributed, transparent, autonomous system for exchanging value.

[Blockchain is radically transforming our economy.](#)

Decentralized technology because blockchain is a distributed database across all computers of the designated block. In order to hack a blockchain, you would have to hack all computers simultaneously.

There's just one minor hiccup no one seems to be addressing.

Within the conventional computing world ... yes, this is an impossible task.

A quantum computer, however can hack all computers at once because **it can be all computers at once.**

### **In Summary:**

Google is collecting and feeding all of our data into algorithms that affect our behavior.

They manipulate research and politics to their advantage.

They are developing cutting edge artificial intelligence combined with quantum computing.

They have invested in mindcontrol technology combined with everything DARPA: our military intelligence.

Google *is* at this point perfectly positioned for world domination whenever they feel they are ready.
